

CONCENTRATION WATER CONTENT DRY SUBSTANCE

measured by microwaves

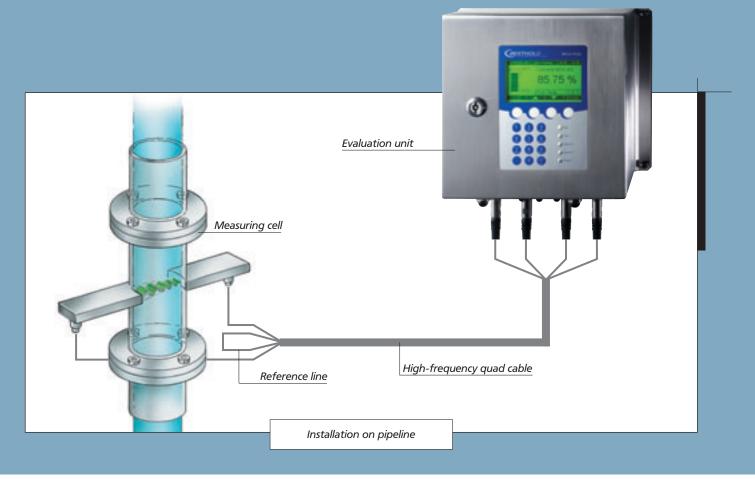

Micro-Polar[™] LB 566

Micro-Polar LB 566

An important parameter in many areas of process control is the measurement of concentration, dry substance or water content for **optimization** and **control**, as well as for **improving quality**. Interfering factors such as colour, inhomogeneity, deposits etc. should have none or only a negligible effect on the measuring value. BERTHOLD TECHNOLOGIES is aware of these demands from years of experience in the industry and has developed the microwave system Micro-Polar. With its special sensors, the Micro-Polar detects the concentration, dry substance or the water content on-line reliably and accurately.

Measuring arrangement

The illustration shows a typical arrangement; the measuring cell is integrated in the pipeline. All material flowing through the pipeline is detected. The evaluation unit is installed near the measuring cell and connected by a special HF cable. The integrated reference line in this cable allows a very accurate system and cable drift compensation.

Areas of Application

Using the Micro-Polar, the concentration, the dry substance or the water content is measured. The product can be in fluid, suspension, paste or powder form. Measuring can take place in pipelines, vessels or in other process related system parts using the different sensors.

Typical areas of application are amongst others, measurement of cream cheese, butter, milk of lime, gypsum suspension, silicic acid etc.

High operational safety and standards of quality

Measuring Principle

In the tried and tested transmission technology, microwaves penetrate the product which causes different strengths of polarisation of the material components. Especially, water molecules can be measured very selectively and accurately, since the free water molecules are polarised due to their natural structure.

As a result, the propagation velocity of the microwaves is slowed down (phase shift) and their intensity is weakened (attenuation). Both effects are measured by Micro-Polar and are used as an indication of concentration or water content.

The multi-frequency technology allows the measurement at a variety of individual frequencies per measuring cycle, therefore a very stable and reliable measurement can be guaranteed after plausibility analysis.

The modern technology applies very weak microwaves which are completely harmless for humans and the environment.

System Configuration

Micro-Polar consists of the evaluation unit, the microwave sensor and a high frequency quad cable. The microwave sensor can consist of:

- Measuring cell of various nominal widths
- Container probe
- Container probe with flushing device

Technical Data Micro-Polar LB 566

Evaluation unit	
Assembly	Wall housing made of stainless steel
	H x W x D: 300 x 323 x 140 mm
	protection class IP65, Weight: approx. 6.5 kg
Auxiliary energy	Depending on instrument version:
, taxinici y crici gy	1.) 90 260 V AC, 45 65 Hz
	2.) 24 V AC/DC; DC: 18 36 V;
	AC: 24 V +5 %, -20 %, 40 400 Hz
Power consumption	max. 30 VA (AC/DC)
Transmitting power	max. 0.1 mW
Temperature range	Operating temperature: - 20 + 60 °C
. en peratar e range	(253 333 K), no condensation
	Storage temperature: - 20 + 80 °C
	(253 353 K), no condensation
Attainable accuracy	$\leq \pm 0.2$ % DS (Standard deviation)
, recardone accuracy	depending on product and sensor
Display	Graphic LC display with back-lighting
Display	114 x 64 mm, automatic contrast setting
Keyboard	Freely accessible foil keypad,
Reyboard	alphanumeric keyboard and 4 soft-keys,
	multi-language dialog, data protection
	through freely selectable password
Interfaces	RS 232, prepared for HART [®]
Innuts	
Inputs Analog inputs	2 x 0/4 20 mA load 50 Q
Inputs Analog inputs	2 x 0/4 20 mA, load 50 Ω
Analog inputs	1 x insulated, 1 x instrument ground
<u> </u>	1 x insulated, 1 x instrument ground Configuration options:
Analog inputs	1 x insulated, 1 x instrument ground Configuration options: DI1: measurement start/stop
Analog inputs	1 x insulated, 1 x instrument ground Configuration options: DI1: measurement start/stop DI2: measurement hold, product selection
Analog inputs Digital inputs	1 x insulated, 1 x instrument ground Configuration options: DI1: measurement start/stop DI2: measurement hold, product selection DI3: sample measurement, product selection
Analog inputs	1 x insulated, 1 x instrument groundConfiguration options:DI1: measurement start/stopDI2: measurement hold, product selectionDI3: sample measurement, product selectionMeasuring range - 50 + 200 °C (223 473 K)
Analog inputs Digital inputs PT-100 connection	1 x insulated, 1 x instrument ground Configuration options: DI1: measurement start/stop DI2: measurement hold, product selection DI3: sample measurement, product selection
Analog inputs Digital inputs PT-100 connection Outputs	1 x insulated, 1 x instrument ground Configuration options: DI1: measurement start/stop DI2: measurement hold, product selection DI3: sample measurement, product selection Measuring range - 50 + 200 °C (223 473 K) Measurement tolerance < 0.4 °C
Analog inputs Digital inputs PT-100 connection	1 x insulated, 1 x instrument ground Configuration options: DI1: measurement start/stop DI2: measurement hold, product selection DI3: sample measurement, product selection Measuring range - 50 + 200 °C (223 473 K) Measurement tolerance < 0.4 °C 1 x 4 20 mA, 1 x 0/4 20 mA
Analog inputs Digital inputs PT-100 connection Outputs Analog outputs	1 x insulated, 1 x instrument groundConfiguration options:DI1: measurement start/stopDI2: measurement hold, product selectionDI3: sample measurement, product selectionMeasuring range - 50 + 200 °C (223 473 K)Measurement tolerance < 0.4 °C

HF Sensor conne	ction
Signal channel	Connection for the HF sensor
	2 x N connectors (Tx, Rx), 50 Ω
Reference channel	Connection for the HF reference cable
	2 x N connectors (Tx, Rx), 50 Ω
HF cable quad	Measurement and reference cable
	lengths 2 m and 4 m (distance sensor –
	evaluation unit), N-connectors, 50 Ω
Sensors	
Measuring cell	
Material	PTFE-lining, stainless steel 1.4301
Product temperature	10130 °C (283403 K)
Pressure range	nominal pressure up to 40 bar, depending
-	on nominal width and type of flange
Flange	Choice of DIN 2527 Form B and ASA
5	Option: screw necks, clamping devices
Varieties	Pipe nominal widths: 50150 mm
Container Probe	
Material	Plastic, stainless steel 1.4301
Product temperature	10 120 °C (283 393 K)
Flange	DIN 2527 Form B:
J	DIN 65 / PN 6
	DN 80, DN 100, DN 150/PN 16
	ASA 2.5"/150 PSI
	others on request
Process connection	minimum insertion hole size Ø (mm)
	for DN 65 / PN 6: 100 ± 0.2
	other: 102 ± 0.5
Design	with integrated reference path
Varieties	1. without flushing device, with PT 100
	2. with flushing device
	2 x 3/8" flush connection
